Affected version:

Description: This has been a personal issue I have had with search results for years now. When searching, the Next and Previous links are at the bottom of the page (which is fine). But since the results can take up different amounts of vertical space, the links move up and down as you go though them. This means you have to move the mouse on every page to find the links.

I propose adding a copy of the Next/Previous links above the search results so you can keep your mouse there as you go through the pages.
