Description:	What version number should we use for the first release?
	I'm thinking 1.1.0 since that is what Redmine just released and it will let plugins sync up to that point for their own dependencies.

Good for me, in essence 1.1.0 would be a "reviewed" redmine-1.1.0 then, and starting 1.2.0 we go our own way?

2011-01-13 05:09 pm - Eric Davis
Yea, that's my thought. It would give plugin/theme developers 6 months or so to switch over (1.1.x series) and we can start making some backwards incompatible changes for 1.2.x.
