

## ChiliProject - Bug # 911: Sub-sub (and deeper) issues CSS rules are overridden

<b>Status:</b>	Closed	<b>Priority:</b>	Normal
<b>Author:</b>	Cory Davis	<b>Category:</b>	User interface
<b>Created:</b>	2012-02-28	<b>Assignee:</b>	
<b>Updated:</b>	2012-03-22	<b>Due date:</b>	
<b>Remote issue URL:</b>			
<b>Affected version:</b>	3.0.0		
<b>Description:</b>	The tr.issue.idnt-1 to tr.issue.idnt-9 CSS rules are overridden (at least in Firefox 10.0.1) and thus do not indent sub-sub (and deeper) issues in issue lists. I solved this locally by adding !important to the 9 CSS tr.issue.idnt-n padding-left rules in application.css.		
	Steps to reproduce: Create issue A. Create issue B and set A as the parent of this issue. Create issue C and set B as the parent of this issue. View the issue list.		
	Expected: A 3 level hierarchy of issues should be displayed.		
	Actual: A 2 level hierarchy of issues is displayed with issue C on the same level as issue B.

I'm not sure I like setting !important everywhere, that seems like a "I don't really know where the problem is but this seems to work"-fix, unfortunately, I fear my CSS-foo is not good enough for this! Could you have a look at which rules override this so we can see if it couldn't be changed? Thanks!

I can confirm this is happening. This line source:public/stylesheets/application.css#L1634 has a (much) higher specificity because of the use of the ID at the start of the line.

Is there a need for it to have the ID present? If it does then the idnt-X CSS lines should also have the ID prepended so that they override it as intended.

There is also very mixed padding values. The initial padding is set to 6px, the first level idnt has a padding of 0.5em (which is also 6px with the default CSS), second level idnt uses 2em (22px padding) and then the padding increases in 1.5em jumps (adding roughly 16 or 17px each time). These should really be changed to use the same amount each time. A quick test looks like adding 12px each time is a nice amount.

- Status changed from Open to Closed

The CSS is dark maid enough for the moment that I wouldn't want to soften rules, I've added the extra @#content@ rule to the issue indentations, thanks for digging that up :-)

(And note that your patch targets projects, not issues)

Committed in commit:26c847a

Ah, so it does (the 12px patch). Issue #926 seems to be the same issue as this but needs fixing for the "tr.project.idnt-1 td.subject" CSS as well.
