ChiliProject - Bug # 415: Wikipages don't store/show the comment correctly

Status:	Closed	**Priority:**	Normal
Author:	Felix Schäfer	**Category:**	Journals / History
Created:	2011-05-17	**Assignee:**	Felix Schäfer
Updated:	2011-05-21	**Due date:**	

Remote issue URL:	
Affected version:	unstable
Description:	I haven't tested this thoroughly, but as far as I can tell, the comment on wikipage update forms isn't stored in the @notes@ field in the new journals scheme, and hence doesn't show on the history view.
	(The comment isn't lost but stored at the wrong place, getting it out of that wrong place will be difficult, so I consider this issue blocking for 2.0)

I think leaving the @comments@ field in the @wiki_contents@ table was an oversight as they are replaced by the @notes@ from @acts_as_journalized@. Here's my proposed changes, the big plus being that they don't break the current interface (put comments pertaining to the current change in @@wiki_content.comments@). There's a lot of cleanup that can be done in the @WikiController@ because of that, but I think that's for a later day.

2011-05-20 06:45 am - Tim Felgentreff

Uh, stupid oversight by me there. I like the patch. You're right, there's a lot of code that can/should be removed from the wiki code, but I guess that doing a sweep and removing duplicate functionality from the codebase should be done from a stable version.

Great :-)

Applied in commit:dbc10d2730952ffcd5ac82b581663d3f69cab72b.

I think removing the @comments@ from @wiki_contents@ broke the fixture loading. The @comments@ lines in source:test/fixtures/wiki_contents.yml should be removed as well.

Attached is a patch, that removed the erroneous lines.

2011-05-20 08:17 pm - Felix Schäfer

Thanks for the patch. I'll wait on the CI to confirm the tests work as expected this time ;-)

2011-05-21 05:30 am - Felix Schäfer

The CI seems to work through, so I consider this closed (again). Thanks for your help Gregor!
