ChiliProject - Feature # 760: Update quick search to use a partial

Status:	Closed	Priority:	Normal
Author:	Peer Allan	**Category:**	Refactoring
Created:	2011-12-10	**Assignee:**	Eric Davis
Updated:	2011-12-10	**Due date:**	
Remote issue URL:			
Affected version:			
Description:	I am working on an alternative search system for Chiliproject and I need to replace the quick search form in the base template. In the current view hierarchy I can't do that without replacing the entire base view.

I've committed something similar in commit:d2ccdc88fa. Due to the new design I had to change the refactoring a little bit.

One thing to note: the partial uses a local variable @search_term@ for the term someone used to search, instead of @@question@. I intend to refactor the @@question@ instance variable out later so if you override this partial use @search_term@ instead.
