

ChiliProject - Bug # 1057: Activity view shows extra people

Status:	Open	Priority:	Normal
Author:	Andrew Smith	Category:	Journals / History
Created:	2012-07-04	Assignee:	Felix Schäfer
Updated:	2012-07-05	Due date:	
Remote issue URL:			
Affected version:			
Description: I've had this bug crop up a few times but no idea what could be causing it. https://www.chiliproject.org/activity?from=2012-05-20&user_id=7 Viewing that page you can see that extra activity from myself as well as SÃ©bastien Santoro. I've attached an image of this happening on our self hosted installation as well.

It seems only extra commits are shown, and that's probably due to their "unusual" nature regarding their connection to a user account compared to the other stuff in there. I'll take a look.

2012-07-05 04:06 pm - Felix Schäfer

So this is going to get really tricky: the @ChangesetJournal@s are created as the user currently logged in when they are created, and that's what the activity filters by, those should be the id of the committer though. One thing though: that will only apply if the committer is found at the @Changeset@ creation time, if you add a link between an SCM and a ChiliProject user (project's repository settings) afterward, it won't link the Journal to that user.
