ChiliProject - Bug # 1061: "Default administrator account changed" is FALSE after upgrade from 3.1.0 to 3.2.2

Status:	Open	**Priority:**	Normal
Author:	Christophe Deliens	**Category:**	User accounts
Created:	2012-07-04	**Assignee:**	Felix Schäfer
Updated:	2012-07-30	**Due date:**	
Remote issue URL:			
Affected version:	3.2.2		
Description:	In 3.1.0, I have renamed the "admin" login to something else (my own login), which worked perfectly.		
	Now that we upgraded to 3.2.2, it looks like ChiliProject is waiting for me to change the password of the default "admin" account, which doesn't exist.		
	Looks like a bug to me ;)

At | More || Information | Default administrator account changed: Red Exclamation Mark is shown...

Is this Due the default adminstrator account Is changed once by me and therefore not default anymore

and shows a Red sign vs a Green sign ?*

I think someone had that problem already and opened a ticket for that, you might want to add your experience to that.

*Yes this Issue: 1061 is the same as i see keep showing Red Exclamation Mark

Due i did Not and UnChanged password of the default "admin" account therefore it stays Red,

changing password turns Green, changing again into default password turns red again :)*

I should leave it this way

*Could be an improve to enhance Text

IsRed mark: Default administrator account changed warning please change default password

IsGreen mark: Default administrator account changed*
