ChiliProject - Feature # 1094: Make repositories private

Status:	Open	**Priority:**	Normal
Author:	Norbert Melzer	**Category:**	SCM
Created:	2012-07-24	**Assignee:**	
Updated:	2012-07-31	**Due date:**	

Remote issue URL:	
Affected version:	
Description:	Please make it possible to hide the repository per project from anyone who is not in a certain group.
	Lets say I have the project "everybody-knows", "half-a-secret" and "very-secret-stuff" and the users "god" and "otto". god is developer in any project and therefore can see the code in every project.
	But otto is only dev for "half-a-secret". Since "everybody-knows" is not private, otto can see these 2, but has no access to "very-secret-stuff"s code.
	The projects themself shall remain visible for everyone, only the source shall be hidden!

I think this can be done, by Roles and permissions, create new Role see Repository section uncheck them and attache this Role to this certain group, and add this group only to the project

Check also non members and Anonymous Roles see Repository section uncheck them, or uncheck them all

sign out and sign in to take effect could help to see the effect sometimes needed

This should be doable with the permissions system, you can't have public projects with concealed repositories and other public projects with world-visible repositories though.
