Explicitly set js calendar until complete switch to jQuery #1121

### History

#### 2012-08-20 06:56 pm - Holger Just

- Affected version set to 3.3.0

- Priority changed from High to Normal

Looks like the new data picker doesn't get applied to HTML loaded with AJAX. Andrew, could you possibly have a look there?

#### 2012-08-20 07:15 pm - Hudson Santos

We have the same issue using ChiliProject 3.3.0 (MySQL).

When I change tracker, calendar icons disappear. Even changing back to old tracker, the icons don't appear again.

Regards,

I could reproduce it and it is probably caused by the new datepicker we introduced with #817 in version:3.3.0.

most probably jquery.live will fix this problem

#### 2012-08-29 05:28 am - Andrew Smith

Yes, this happens because the datapicker JS is only run on DOM ready. Alas, there isn't a "html change" event that can be attached to so that the snippet can be re-run. The JS that updates the form when changing the dropdown is still using Prototype and needs to be moved to jQuery.

The quick and easy fix is to move the datapicker JS inline on the issue form so that it'll run whenever the content gets reloaded. If I can't think of a nicer way of doing it then I'll open a PR for that, but I'd rather keep it as part of the application.js file and have some event fire instead.

Due to the fact that this problem shows up during daily work, I and some other users hoped that it gets a high priority (and would be fixed with 3.4.0).

So: Can we schedule it for 3.5.0? If it's a small fix maybe I could try to add it (I'm a little bit unexperienced with Ruby, but adaptable).

#### 2013-01-08 01:20 pm - Felix Schäfer

- Target version set to 3.8.0

- *Priority changed from Normal to High*

Indeed. We'll see about a fix release if necessary.

**2013-03-19 09:30 pm - Felix Schäfer**

- *Assignee set to Felix Schäfer*

- *Status changed from Open to Closed*

Explicit calendars added back in commit:1e2a029, this corrects the problem of changing the trackers. They can be removed after the tracker change is done in jquery.
