

ChiliProject - Bug # 1135: Bulk edit of selected fields over set of issues

Status:	Closed	Priority:	Normal
Author:	Radek Terber	Category:	
Created:	2012-09-06	Assignee:	
Updated:	2012-09-07	Due date:	
Remote issue URL:			
Affected version:			
Description:	It would be great to have ability to select set of issues and to be able edit selected fields. The most important fields that should be changable this way are: * assignee (the person who the issue is assigned to) * parent project (the project that the issue belong to) * release number * project status (this is questionable, advantage I see to close obsolete records)

- *Status changed from Open to Closed*

Right now, you can create an issue query to view all the issues you want to change in a list. Then you can select/mark these issues and right click on them. There should be a context menu where you can change most fields in bulk directly from this context menu.

Alternatively, you can select "Edit" where you get a form to change most fields at once and even add a message.

Please see the screenshot below for an example:

Great to hear that. This functionality seems to be even better than I expected. Thanks.
