

ChiliProject - Bug # 1141: Failing Test

Status:	Needs more information	Priority:	Normal
Author:	Nicolas Paez	Category:	Testing
Created:	2012-09-12	Assignee:	
Updated:	2012-10-19	Due date:	
Remote issue URL:			
Affected version:			
Description:	Hi everyone, I have downloaded the latest version and run test. I found that several tests are failing, could you someone confirm this or is it just an issue of my environment?

- Status changed from Open to Needs more information

This is strange. Right now, the only tests that are known to fail are some Darcs repository adapter tests with newer versions of Darcs. Could you please state which tests fail and provide some additional information, e.g. full test logs and stack traces if available.

Note that some tests (most importantly the repository tests) require the respective binaries and the test repositories to be installed. Also, make sure you have no custom plugins installed. There are many which patch the core without patching the tests thus breaking the test suite when installed.

Our full test suite runs on "Travis-CI":<http://travis-ci.org/#!/chiliproject/chiliproject> in multiple configurations. As said above, the only tests currently failing there are related to the Darcs version.

- File *unit-test-failed.png* added

I started by running unit tests (rate test:units) and got output in the image below.
