Affected version:	
Description:	We're using a custom field, integer, in our projects. I got the complaints that sometimes when sorting or filtering (1 01) and sometimes not. After a short chat on #chiliproject, I got the impression that it's likely caused by how the ints are internally saved and recasted?
	We're running ChiliProject 3.3.0.080c5b63c (MySQL). The custom field is in Format Integer, min and max length are both 0, no regex and default value of 1000. It's required, for all projects and used as a filter.
	Any infos missing for you?

- Assignee set to kwadronaut .

I'm assigning to myself for now, because we're internally trying to reproduce. It might have been only appearing with 1/01, where chili sometimes changed 1 to 01 or the way around.

2012-10-02 04:00 pm - kwadronaut .

- Status changed from Open to Closed

We weren't able to reproduce, so tidying up.
