Remote issue URL:	
Affected version:	
Description:	At this moment there is a controller_timelog_edit_before_save hook but I would like to have a similar hook but for AFTER case. It would be something like: controller_timelog_edit_after_save.

I have implemented it in my environment.

I just added two lines of code (it fact is just one line in to places)

* Line to add: _call_hook(:controller_timelog_edit_after_save, { :params => params, :time_entry => @time_entry })_

* File to add it: timelog_controller.rb

* Place to add it: right below _if @time_entry.save_

Why don't you simply use the @after_save@ hook of the @TimeEntry@ model which is provided by Active Record?

Generally, I'd like to deprecate/remove all hooks, but foremost the controller hooks. They are just not the right kind of technology for the task and a PITA to maintain.

2012-09-20 06:29 pm - Nicolas Paez

Two reason lead me to this approach:

The hooks are mentioned in the documentation as an standard extension mechanism

The hook provides me more information

I think that if you plan to remove hooks support, you should mention it in the documentation.
