

ChiliProject - Bug # 1174: Attachment deleted issue notification does not include list of changes.

Status:	Needs more information	Priority:	Normal
Author:	Greg Thornton	Category:	Issue tracking
Created:	2012-11-01	Assignee:	Felix Schäfer
Updated:	2013-01-20	Due date:	
Remote issue URL:			
Affected version:			
Description:	To reproduce: create an issue, add an attachment, delete the attachment. The email notification sent upon delete will not mention that a file was deleted, only that the project was updated.

- Status changed from Open to Ready for review

Pull request: <https://github.com/chiliproject/chiliproject/pull/233>

In @Issue::attachment_removed@, the new journal is first created without any attributes, then updated with the attributes indicating an attachment was removed. The email notification is triggered upon creation, before the update, meaning the email has no changes to report. This simple patch uses the @@extra_journal_attributes@ attribute provided by @acts_as_journalized@ to pre-fill the journal changes before creation. I suspect that's the intended use of this attribute, although I'm pretty unfamiliar with the internals of @acts_as_journalized@.

Now that I've gotten way deeper into aaj, I'll take another look at my code and see if there's not a better fix.
