Hello Vladislav,

thanks for taking the time to report this issue.

The problem is most likely caused by a plugin Gemfile or a Gemfile.local. It might be the case that one or the other define an explicit dependency to an earlier version of the JSON gem. Please try to locate this declaration and update it to the same version, which is required in ChiliProject's updated main Gemfile. This should let you run bundle update without errors.

Please report back, if this has solved your issue.

Best,

Gregor

- Status changed from Open to Closed

Thanks! Some plugin requires another json version.
