Thanks for the notification. It seems we had a non-proper encoding in our database in the past. I have re-added the git repo and now everything looks fine for me.

Meh. It seems we have some encoding issue when using @mysql2@ on ree (as we started to do). If we continue with @mysql@ everything is fine.

I have reverted to using mysql for now and am going to investigate and fix the root cause later. Thanks for your pointer, Toshi.

Yeah, we had to update the system due to a half-automatic OS upgrade. That means we are now on Ruby 1.9. I suspect, something was odd with the database encoding in our Ruby 1.8 phase. I'll investigate and probably clean the database by hand if nothing substantial comes up.

Anyway, thanks for noticing.
