

ChiliProject - Bug # 1259: Filter by last updated fails with "Updated can't be blank", isn't

Status:	Open	Priority:	Normal
Author:	Ryan Lee	Category:	Issue tracking
Created:	2013-03-29	Assignee:	
Updated:	2013-03-29	Due date:	
Remote issue URL:			
Affected version: 3.8.0			
Description: <p>If I try to filter issues by "Updated" and any of the duration operators (more than, less than days) and fill in a value, attempting to apply the filter results in an error "Updated can't be blank" - it obviously isn't blank in the UI.</p> <p>Using Firebug to delete the other form inputs sharing the same name so only the one I fill out gets submitted bypasses the error. If I don't do that, three inputs get submitted, and app/models/query.rb's validate method checks if the values.first.blank? - which is true, so it gets marked invalidly blank.</p> <p>I'm not really keen to enter into the ChiliProject contribution process, so I'm hoping someone else can adopt this. I made a quick change to fix this one problem that may break a bunch of other things / may not fit coding practices around here / etc.:</p> <p>https://github.com/zepheiryan/chiliproject/commit/2acd08a3a56ff9c75638f5dfc52cd9be8a11b987</p>
