Where are they not translated at?

In the default roles and workflows you can import after a brand new installation (seen in _Roles and permissions_ settings).

Hi there.

Here is a pull request for this issue.
It will need some translations since I only knew for English and French.

Looks sound to me, haven't tested it yet though. If there are no objections, I'll merge it after having tested it.

I think simple/commit commits don't need @--no-ff@. You should set the committer to yourself so we know who to blame later ;)

Mercurial has *named branch*.
Mercurial Crew Repository revision graph is very simple.
