

ChiliProject - Feature # 132: My Page blocks for Forums

Status:	Ready for review	Priority:	Normal
Author:	Derek Montgomery	Category:	My Page
Created:	2011-02-03	Assignee:	
Updated:	2011-02-12	Due date:	
Remote issue URL:			
Affected version:			
Description:	It would be convenient to have the same tracking as issue tracking for forums on the user page (at least own created topics list for example)		
	The sentence was quite confusing indeed.		
	On "My page", you can have the following blocks:		
	* issues you submitted		
	* issues you are watching		
	* issues assigned to you		
	It might be convenient/interesting to have the following blocks too:		
	* last x topics you started		
	* last x topics you participated in		
	* topics you are watching		
	Is that any clearer?

- Status changed from Open to Needs more information

I'm not sure I understand, can you give me an example?

2011-02-04 06:43 am - Derek Montgomery

The sentence was quite confusing indeed.

On "My page", you can have the following blocks:

- * issues you submitted
- * issues you are watching
- * issues assigned to you

It might be convenient/interesting to have the following blocks too:

- * last x topics you started
- * last x topics you participated in
- * topics you are watching

Is that any clearer?

- Status changed from Needs more information to Open

2011-02-05 12:59 am - Eric Davis

- Subject changed from Forums tracking on user page to My Page blocks for Forums

- Category changed from User accounts to My Page

Ah okay, I understand now. I usually call those My Page Blocks. I've updated the title and description.

I've started on this, that requires some smaller changes to the forum views though, so it'll take a little more work.

Eric: want to include this in 1.1.0 or 1.2.0?

2011-02-11 06:59 pm - Eric Davis

Felix: I'll have to see what the changes are. If they are minor we can put them into a minor release (1.1.0/1.x.0) but if they are major we will need to put them into 2.0.0.

That would mostly be pulling view parts out to partials, so no "code change" per se. Would that work for a minor, or should I just create additional partials for what I need and we can merge/simplify it for the next major?

2011-02-11 11:52 pm - Eric Davis

If it's just extracting to partials it should be fine for minor.

Eric: I'm having a little problem with that one: I think I'd more or less manage that one with SQL subqueries, but I'm not sure how or if I can get there using AR. Could you see if you have an idea for a query?

What I need is a unique list of visible threads (@Message.visible.all :condition => {:parent_id => nil}@) that contain a message created by the current user. My problem is that topics are essentially a @Message@ without a parent, thus "topics containing a message created by the current user" can be either a message with no parent created by the user or the parent of a message created by the user and all those together have to be unique. Do you have an idea how to get those short of collecting all the corresponding IDs in ruby, uniq them and select all topics that way?

- Status changed from Open to Ready for review

Ok, I have a working version, I'm a little unsatisfied with the "threads I participated in" bit, but I couldn't think of a better way other than redesigning the DB schema.

The pull request: <https://github.com/chiliproject/chiliproject/pull/6>, I'll wait on a code review from either Eric or Holger on this one though.

Eric: I didn't change existing views after all, I made a list that's a little more lightweight than what is already in there, so no extraction for now.
