

ChiliProject - Bug # 1346: Export to CSV is incompatible with Windows OS

Status:	Open	Priority:	Normal
Author:	Ivan Ivanov	Category:	My Page
Created:	2014-06-23	Assignee:	
Updated:	2014-06-23	Due date:	
Remote issue URL:			
Affected version:	2.1.1		
Description:	I'm trying to export my issues by clicking "Also available in: CSV" link at the bottom of the list. In Windows world, UTF8 text files must begin with the 3 bytes 0xEF, 0xBB, 0xBF. That bytes are called Byte order mark (BOM): http://en.wikipedia.org/wiki/Byte_order_mark Without them, all Windows software (notepad, Excel, etc) assume the file is ASCII, and displays garbage instead of the international characters. This makes the .CSV unusable unless it's in English.
