

ChiliProject - Feature # 142: Default owner for newly created issues

Status:	Open	Priority:	Normal
Author:	David Alves	Category:	Issue tracking
Created:	2011-02-04	Assignee:	
Updated:	2013-02-05	Due date:	
Remote issue URL:			
Affected version:			
Description:	Hello, It would be great if we can set a default owner for issues per project, let's take this simple workflow <pre> create issue -> assigned automatically to the default owner -> The default owner review the issue and dispatch it to another person -> ... </pre> Adding a property "issues_default_owner_id" to a project and assign issues to it when != nil? would be great, but maybe there are better ways to do that. Thanks you. David.

This feature is basically already exists. You can achieve this by using issues categories. But you can't set default assignee when no issue category was provided by reporter. So, I guess this will be good feature. If nobody is against I would like to prepare patch to achieve this goals (if there's no such patch already).

2011-02-04 10:20 pm - Derek Montgomery

I'd vote up for that feature too.

- Category set to Issue tracking

We could do this by having a "(no category)" option in each project's Settings > Issue Categories. I think I'd use this a lot myself.

For what it's worth, I'd love to see this feature. Eric's proposed "(no category)" implementation sounds great.

2011-04-14 04:36 pm - Robert Chady

This functionality is currently provided by a plugin -- redmine_default_assign. It is a trivial enough change it should be easy to incorporate in to CP... though it has no tests so that will need to get added.
