

ChiliProject - Feature # 177: Minimize Redmine.pm for authorization code reuse

Status:	Ready for review	Priority:	Normal
Author:	Stephan Eckardt	Category:	SCM
Created:	2011-02-11	Assignee:	Holger Just
Updated:	2013-03-19	Due date:	

Remote issue URL:

Affected version:

Description: Authorization for SVN repositories is done in a separate perl module Redmine.pm. This perl script is mostly a rewrite of ChiliProject's internal authentication mechanism, which is a bad case of code duplication.

Because of this, changes to ChiliProject's authentication mechanism (e.g. new authentication sources) always have to be written once in ruby and a second time in this perl script.

It would be nice if the amount of code in Redmine.pm could be minimized and in such a way that the perl script only asks ChiliProject if access using the supplied credentials is granted or not.

FYI I already have code

Holger, are you working on this? If not, then we should bump it out of 3.0.0 until it's ready.

- Target version deleted (3.0.0)

Bumping out of 3.0.0 until the code is ready for this.

- Status changed from Open to Ready for review

I implemented a new @ChiliProject.pm@ module which fully uses the Chiliproject authentication sources. As I'd like some testing before we merge this into master (as a full replacement for Redmine.pm), I'd target this for version:3.5.0.

2012-09-05 02:26 pm - Holger Just

- Target version set to 3.8.0

The pull request is at <https://github.com/chiliproject/chiliproject/pull/229>

Meh, this still doesn't work the way IO actually liked it too. I'm going to have a deeper look and merge it into version:3.5.0
