Feeling lazy right now to put it properly in wiki so I'll paste it here to not forget.

```
<pre>
```

```
from redmine stable 1.1.1
```

```
Gentoo Linux 64bits
```

```
apache 2.2
```

```
mysql 5.1
```

```
passenger 3.0.2
```

```
ruby 1.8.7
```

```
rubygems 1.3.7
```

```
actionmailer (2.3.5)
```

```
actionpack (2.3.5)
```

```
activerecord (2.3.5)
```

```
activeresource (2.3.5)
```

```
activesupport (2.3.5)
```

```
i18n (0.4.2)
```

```
mysql (2.8.1)
```

```
rack (1.2.1, 1.0.1)
```

```
rails (2.3.5)
```

```
rake (0.8.7)
```

```
rmagick (2.13.1)
```

```
ruby-openid (2.1.8)
```

```
14:54:50 | ofc backed up files and db
```

```
14:55:22 | copied config/{configuration,database,additional-environment}.yml files
```

```
14:55:26 | copied plugins
```

```
14:55:29 | copied themes
```

```
14:55:34 | copied files
```

```
14:55:42 | all of that into fresh clone of master
```

```
14:56:06 | then did the usual rake generate_session_store
```

```
14:56:12 | rake db:migrate RAILS_ENV=production
```

```
14:56:16 | rake db:migrate:upgrade_plugin_migrations RAILS_ENV=production
```

```
14:56:20 | rake db:migrate_plugins RAILS_ENV=production
```

```
14:56:26 | rake tmp:cache:clear
```

```
14:56:27 | rake tmp:sessions:clear
```

```
14:56:30 | restarted apache
```

```
</pre>
```

- Status changed from Open to Closed

I've added documentation for [\[\[Upgrade|upgrading ChiliProject\]\]](#) and to [\[\[Migrate From Redmine\]\]](#). Like I said in IRC, it looks like Redmine 1.1.1 and below are just a straight switch over to our git repo and then a `@db:migrate@`.

Redmine trunk and 1.2 will need some work since they include more database changes but they aren't yet released and we might pull in some of their code anyway.

P.S. I tested the upgrade with a Redmine 0.9, 1.0-stable, and 1.1-stable databases. My ChiliProject development database is also based on 1.0.5 and it was migrated cleanly a few weeks ago.
