

ChiliProject - Feature # 230: Allow the loadpaths of themes to be specified in configuration.yml

Status:	Closed	Priority:	Normal
Author:	Holger Just	Category:	Themes
Created:	2011-02-27	Assignee:	Eric Davis
Updated:	2011-03-24	Due date:	
Remote issue URL:			
Affected version:			
Description:	Currently, the theme loadpath is hard-coded in source:lib/redmine/themes.rb#L92. This path should be overrideable in configuration.yml and should allow more than one path.		
	I have code for it that just needs to be extracted.

How would this work if we convert themes to full plugins?

2011-03-23 12:24 am - Eric Davis

Holger:

How is this coming? Is there a branch I can review?

- Assignee deleted (Holger Just)

- Status changed from Open to Ready for review

Please see <https://github.com/chiliproject/chiliproject/pull/31>

2011-03-23 11:37 pm - Eric Davis

- Category set to Themes

Thanks Holger, it looks fine to me with a few comments:

* the default option is in @Theme#theme_paths@. Felix has mentioned putting all of the defaults into @Configuration@ instead.

* quite a bit of whitespace changes, might be good to cherry-pick and `git add -p` so only the code is pulled in. At least until all of the files are line-ending/trimmed.

* There is a documentation copy and paste error from @/files@.

If this looks good to everyone else, I'll merge it for the release (and make these minor changes at that time).

- *Status changed from Ready for review to Closed*

Merged to master with a few changes (whitespace and docs). commit:8cfe498bd60cdb7fab3f953e1e14aed004361856
