

ChiliProject - Feature # 247: Create compatibility layers for Redmine in an optional (non-core) plugin

Status:	Open	Priority:	Normal
Author:	Holger Just	Category:	
Created:	2011-03-01	Assignee:	
Updated:	2011-03-02	Due date:	
Remote issue URL:			
Affected version:			
Description:	This plugin could ease migration of Plugins from Redmine to ChiliProject by offering compatibility layers and emulating the existing APIs. We should not soil the internals of ChiliProject with legacy APIs.

This plugin could also offer usability for future RedMine work without modifying core ChiliProject code.

2011-03-02 12:28 am - Eric Davis

I think this should be a core plugin, at least for 1.x and 2.x.

2011-03-02 07:44 am - Sergey Belov

why do you make it as a plugin? Is it not possible to keep old API and just write new APIs for Chili ?

I'm not sure we will keep all the current API (or at least probably not in the current form), we need to make clear that the supported bits are the `_current_` Redmine APIs, nothing that will be added later is guaranteed to be ported, and having stuff in a "Redmine" namespace in a project called ChiliProject, well, that might raise more questions than solve problems :-)

2011-03-02 08:35 am - Sergey Belov

I see :)

Well, I think that popular plugins will be ported to ChiliProject any way.

2011-03-02 11:54 pm - Eric Davis

Just for clarity, I'm talking about the internal API here not the external REST API. So the different methods defined on the classes, etc.
