

ChiliProject - Feature # 249: Be able to choose what kind of repository is created

Status:	Duplicate	Priority:	Normal
Author:	S C	Category:	SCM
Created:	2011-03-02	Assignee:	
Updated:	2011-12-18	Due date:	
Remote issue URL:			
Affected version:			
Description: Chili allows us to automate repository creation for only one SCM at a time. Am I wrong or it is impossible to choose which kind of repo is created for a new project ? In my company, we use Subversion and Git. We automated Subversion repository creation but we still have to create the Git repos manually. Would be cool if we make it possible to choose the kind of created repository :)

I think you could run two repoman.rb scripts (one for svn and one for git) but then it would then be based on which script runs first after a new project creation.

- Status changed from Open to Duplicate

Closing this on in favor of #454. Although that came later, it better describes the probably best solution.
