ChiliProject - Bug # 321: Duplicating an issue should copy the "Parent task" value

Status:	Open	Priority:	Normal
Author:	Hugo Ferreira	Category:	Issue tracking
Created:	2011-04-08	Assignee:	
Updated:	2011-04-08	Due date:	

Remote issue URL:	
Affected version:	
Description:	When duplicating a subtask, the most "logical" intention (at least for me) is to also create a subtask of that same parent issue.
	Currently the "Parent task" field doesn't carry over from the duplicated issue.

History

2011-04-08 08:57 am - Hugo Ferreira

A better title is probably: "Duplicating an issue should copy the "Parent task" value"

2011-04-08 10:36 pm - Eric Davis

- Subject changed from Duplicate issue should copy the "Parent task" value to Duplicating an issue should copy the "Parent task" value

- Tracker changed from Feature to Bug

- Category changed from User interface to Issue tracking

Agreed. Marking this as a bug.
