

ChiliProject - Feature # 395: [Git support] Clones/forks

Status:	Open	Priority:	Normal
Author:	Thibaut Cuvelier	Category:	SCM
Created:	2011-05-13	Assignee:	
Updated:	2011-05-13	Due date:	
Remote issue URL:			
Affected version:			
Description: Sub-request for https://www.chiliproject.org/issues/392 .			
Having the possibility to register a Git repo as a clone (or fork) of another repo, and to create this new repo locally if asked for.			
How this should behave: on a project's Repository tab, if using Git, propose a new Fork or Clone button, which proposes to create a new repo for this fork (stored on the server or not, I do not know what is possible, nor what is feasible with Git).			

History

Forgot one point: it will be necessary to have a list of all the clones and to show it somewhere in the Repository tab.
