ChiliProject - Feature # 396: [Git support] Add support for pulling requests

Status:	Open	**Priority:**	Normal
Author:	Thibaut Cuvelier	**Category:**	
Created:	2011-05-13	**Assignee:**	
Updated:	2011-05-13	**Due date:**	

Remote issue URL:	
Affected version:	
Description:	Sub-request for https://www.chiliproject.org/issues/392.

It is all about managing Git's pull requests inside CP: you can do commits on your own clone and ask the Git you're cloning to put your changes into his Git.

Dependency on #395.

Once you have forked, you can go on your fork's page on CP, then click Pull request: you will have to say what you have done in the code, select what commits you want to be merged into mainstream, then send; then, the team responsible for the project you forked will have to refuse or to accept your patches, with comments (based on the forums? not too tightly, not everyone wants to have the forums enabled).
