Description:	I propose we start naming our releases to put some fun into the project. If so, I propose the name of "Bell" for our first release. It's a sweet pepper so:

* shows that we are a nice project
* it's very plain so it's similar to Redmine (for now)

Thoughts?

I like the idea of naming releases like that. I found this always funny to observe of OS X and Android. Other names can be found in this database:

http://www.pepperworld.com/cms/botanik/chili-datenbank.php

I cant wait for a _hot_ release like Piri-Piri!!!
