

ChiliProject - Feature # 506: Support for "local" Gemfile - Gemfile.local

Status:	Closed	Priority:	Normal
Author:	Ammler _	Category:	Libraries
Created:	2011-07-04	Assignee:	Eric Davis
Updated:	2011-07-22	Due date:	
Remote issue URL:			
Affected version:	2.0.0		
Description:	please consider to support a local Gemfile so edit source file Gemfile is not needed, this is e.g. required to run cp with unicorn:		
	<pre><pre> bundle exec unicorn_rails -E production </pre></pre>		
	my patch suggestion: (also fixes faulty ignores for hg) http://paste.pocoo.org/raw/429291/		
	from meineerde: https://gist.github.com/1063860

Is this any better than creating a @vendor/plugins/local/Gemfile@?

2011-07-05 09:31 am - Ammler _

You mean, I should make a Plugin to run cp with unicorn?

2011-07-06 02:47 pm - Gregor Schmidt

Not a full-blown plugin - just a folder in @vendor/plugins@ to put your Gemfile in.

I know, this seems like a weird work-around, but on the other hand, it would save us from another exception/special rule. And nobody knows, what this might buy us in the future.

This is just a proposal to fix your problem with minimal effort. If this is not feasible, please tell us.

This workaround is good and working, thanks...

- Target version set to 2.1.0

- Assignee set to Eric Davis

- *Category set to Libraries*

- *Status changed from Closed to Open*

Thought of a use case where we will need a Gemfile.local (and one that I'll be using more and more).

Plugins installed as gems... A Gemfile.local would let you add gem plugins in there, which would then let them include their own dependencies as part of rubygems itself.

This will especially become important with Rails 3 since it makes having gem plugins (engines) easier.

2011-07-22 09:51 pm - Eric Davis

- *Subject changed from Support for "local" Gemfile to Support for "local" Gemfile - Gemfile.local*

- *(deleted custom field) set to 2.0.0*

- *Status changed from Open to Closed*

I added support for a @CHILIPROJECT_ROOT/Gemfile.local@ to master.
