

## ChiliProject - Feature # 507: Option to run git fetch in SysController#fetch\_changesets

<b>Status:</b>	Open	<b>Priority:</b>	Normal
<b>Author:</b>	Eric Davis	<b>Category:</b>	SCM
<b>Created:</b>	2011-07-05	<b>Assignee:</b>	
<b>Updated:</b>	2011-07-06	<b>Due date:</b>	
<b>Remote issue URL:</b>			
<b>Affected version:</b>	2.0.0		
<b>Description:</b>	I propose that we add an optional parameter that will run <code>@git fetch --all@</code> when a request is made to <code>SysController#fetch_changesets</code> and the repository is a git repository. This will let any hooks (like "Github": <a href="https://github.com/blog/877-github-services-get-an-upgrade">https://github.com/blog/877-github-services-get-an-upgrade</a> ) actually update the local git repository.  This would help automate the Git workflow between ChiliProject and Github.

According to the discussion at <https://www.chiliproject.org/boards/1/topics/525> it shall help create the local repository with `--mirror` flag, so that it will easy repository updates.
