ChiliProject - Bug # 520: Missing JournalFormatter causes Issue atom feed to blow up

Status:	Closed	**Priority:**	Normal
Author:	Ryan Briones	**Category:**	Journals / History
Created:	2011-07-13	**Assignee:**	
Updated:	2011-07-22	**Due date:**	

Remote issue URL:	
Affected version:	2.0.0
Description:	Had a weird issue where an atom feed for a specific Issue was blowing it. I believe I've tracked it down to @"#format_attribute_detail":https://github.com/chiliproject/chiliproject/blob/stable/vendor/plugins/acts_as_journalized/lib/journal_formatter.rb#L61@ returning nil because @author_id@ does not have a corresponding @"register_on_journal_formatter":https://github.com/chiliproject/chiliproject/blob/stable/app/models/issue.rb#L48@ entry. By adding @author_id@ to the @:named_association@ entry, I was able to fix my issue, but I'm not clear on all the AAJ changes, so I'll leave it to a pro to decide if this is the proper patch. Looks like the view @journal/index.rxml@ has been updated in stable to potentially deal with the fact that @Journal#render_detail@ may return nil.

Cheers |

Hmm... just realized this may not be a bug. Author cannot be changed with a *vanilla* ChiliProject...

2011-07-22 03:22 pm - Eric Davis

- Category set to Journals / History

- Status changed from Open to Needs more information

Are you running a custom patch to change the issue author? If so then this wouldn't be a bug until we apply that patch (or allow author changes).

Yes, that's what I was implying in the update. Probably no need to fix this unless you allow author updates that cause journals to be created.
