

ChiliProject - Bug # 531: search#index raises NoMethodError for #event_datetime

Status:	Closed	Priority:	Normal
Author:	Ryan Briones	Category:	
Created:	2011-07-20	Assignee:	
Updated:	2011-12-18	Due date:	
Remote issue URL:			
Affected version:	2.0.0		
Description:	<p>In our ChiliProject implementation we were seeing some weird errors when doing searches. Doing some research into it, here's what I found:</p> <p>* *search#index* gets results and calls @#sort@ on them with a block that compares @Issue#event_datetime@</p> <p>* @#event_datetime@ is defined via https://github.com/chiliproject/chiliproject/blob/master/vendor/plugins/acts_as_journalized/lib/redmine/acts/journalized/deprecated.rb#L38-57 and makes a call to @reset_journal_changes@ and @reset_journal@</p> <p>* this appears to make a @#save@ happen because a custom life-cycle hook was being triggered. In that hook, a method is called on a value that is @nil@, which raises an error and oddly bubbles up to the NoMethodError</p> <p>I don't have enough context into the AAJ changes, but it seems like the scope of @event_*@ methods that get set to use the @reset_journal@ implementation could be too wide.</p> <p>As a short term fix we're adding nil checks to our custom life-cycle hooks, but I feel like this could be a problem for others.</p>

There's been some work done on aaj in 2.1.0, do you still have the same errors?

2011-08-26 09:16 pm - Ryan Briones

This hasn't happened to us in a long time since we've worked around the issue. Unfortunately today is my last day at this client. I'll point them to this thread in case there are any issues going forward that this can solve.
