Affected version:

Description: Split from the New Layout (#263) for further discussion:

> Image thumbnailing - the theme (and custom code) creates image thumbnails and previews of any uploaded image files. I think this is a great feature but we should implement it differently (S&P's implementation wasn't flexible enough after testing). This would also add MIME icons for common file formats (e.g. document icon for Word docs).

I certainly have a use for this.
