

ChiliProject - Feature # 563: Cascading Permissions for Subprojects

Status:	Open	Priority:	Normal
Author:	Ferdinand Thommes	Category:	Permissions
Created:	2011-08-06	Assignee:	
Updated:	2011-08-06	Due date:	
Remote issue URL:			
Affected version:			
Description:	We envision a button, that could be placed in the configuration section, to activate the same set of rights of *project* in all subprojects. Also more than handy would be a button to revert this action.

Issue list now supports bulk edit/move/delete (#563, #607). For now, issues from different projects can not be bulk edited/moved/deleted at once.

There are 2 ways to select a set of issues on the issue list:

- * by using checkbox and/or the little pencil that will select/unselect all issues (#567)
- * by clicking on the rows (but not on the links), Ctrl and Shift keys can be used to select multiple issues

Context menu was disabled on links so that the default context menu of the browser is displayed when right-clicking on a link (#545).

All this was tested with Firefox 2, IE 6/7, Opera 8 (use Alt+Click instead of Right-click) and Safari 2/3.
