ChiliProject - Bug # 568: migration fails from 1.1.0 to 2.1.1

Status:	Needs more information	**Priority:**	Normal
Author:	pille palle	**Category:**	
Created:	2011-08-08	**Assignee:**	
Updated:	2011-09-07	**Due date:**	
Remote issue URL:			
Affected version:	2.1.1		
Description:	from mnemonikk:		
	We hit a problem while upgrading from version 1.1.0 to 2.1.1.		
	The migration MergeWikiVersionsWithJournals caused an exception because the attribute "changes" was passed as a string, already serialized to YAML, while ActiveRecord was expecting a hash.		
	I think this should be fixed by removing .to_yaml from line 33 in db/migrate/20100804112053_merge_wiki_versions_with_journals.rb.

I believe you met same problem as I did #554, running Ruby 1.9.2. Use Ruby 1.8.7 on migration. The problem is that 1.x branch was not supposed to work with Ruby 1.9.2

i doubt that. i'm running:
<pre>
ruby 1.8.7 (2011-02-18 patchlevel 334) [x86_64-linux], MBARI 0x6770, Ruby Enterprise Edition 2011.03
</pre>

it may be a model-change somewhere inbetween listed chiliproject versions.

For what it's worth I experienced the same problem. We upgrade from Redmine 1.1.2 to ChiliProject 1.5.2 (We did this because the DB migration failed for the later versions.) Trying to upgrade ChiliProject from 1.5.2 to 2.X.X caused the db migration to fail with an output as seen in issue #554. This is preventing us from using ChiliProject.

2011-09-07 02:59 pm - pille palle

as we solved the problem, we don't observe it anymore.
others may still be hit by this one.
i'd like to add that our instance was migrated from redmine to chiliproject-1.1.0 in the past.

if you're interested in any particular data, please let me know. our whole dump is about 85M and i don't like to disclose it completely.

Can you say what you did to get around, or fix, the issue?
