

ChiliProject - Bug # 573: acts_as_searchable definition in WikiPage may be insufficient and cause SQL errors

Status:	Closed	Priority:	Normal
Author:	Gregor Schmidt	Category:	
Created:	2011-08-10	Assignee:	
Updated:	2011-08-21	Due date:	
Remote issue URL:			
Affected version:	master		
Description:	The find option :include will not always cause a JOIN. Therefore conditions need to explicitly reference the joined table, to make it work. This is not done for the join performed by @acts_as_searchable@ in @app/models/wiki_page.rb@ See comments on APIDock:" http://apidock.com/rails/ActiveRecord/Base/find/class#163-Specifying-include-no-longer-necessarily-joins-the-association " for more detailed explanation We are running into this issue in one of our plugins cucumber steps. I was not able to reproduce this issue outside of cucumber, but I guess the proposed change is small enough and conforms to best practices, so that it should be fine to add, even without a proper way to reproduce the error. Pull request on the way.

2011-08-21 03:58 pm - Felix Schäfer

- (deleted custom field) set to master

- Status changed from Ready for review to Closed

If column names are explicitly given, they should be full column names with the table name. Committed in commit:3d03a3e, thanks.
