You probably have a plugin that isn't compatible with ChiliProject 2. Do you have any plugins that create "job" or similarly named activity entries?

2011-09-05 02:47 pm - Holger Just

- *Status changed from Open to Needs more information*

There is no such association defined on a user model in the core ChiliProject. Therefore, I assume you have installed a plugin which either:

- * is not fully installed (e.g. you've forgotten a database migration),
- * not compatible with ChiliProject,
- * or just plain broken.

Please remove any user-installed plugins and try to identify which plugin is creating the error. Then contact the original author.

Doing a grep (as expected) I can find many words "job" inside the hudson plugin.

but we need it and there isn't a port for chiliproject.

I need other plugins for which there isn't a chiliproject porting yet (gitolite and mylyn).

The thing that they could stop working is blocking and could force me to freeze the chiliproject version and / or switch back to redmine.

This is another "bug / feature request" of course.... But I would really like to keep up with chili.

going back to the ticket...

hudson plugin is working in project setting and I can execute Jenkins jobs from my project.

If you can't provide support for this plugin can you help me (and other with the same issue) to identify the issue withing the hudson source code and disable/fix the part that cause the issue?

doubt so :)

> * not compatible with ChiliProject,

this could be :/

> * or just plain broken.

doubt so

is there a way to "temporary" disable a plugin without uninstalling it?

Change the permissions of the plugin's directory to something the user running ChiliProject can't read (or just set them to 000 to be sure).

Regarding the plugin: the journaling/versioning scheme has changed in ChiliProject 2, meaning plugins using those or providing activities need to be updated. I can provide you or the author of the plugin with docs and/or instructions to update the plugin as needed.

thanks

I did it and I confirmed the issue is within the redmine_hudson plugin

> Regarding the plugin: the journaling/versioning scheme has changed in ChiliProject 2, meaning plugins using those or providing activities need to be updated. I can provide you or the author of the plugin with docs and/or instructions to update the plugin as needed.

I'm a developer but not a Ruby's one: if it's not very complicated I'm willing to fix the software.. And I would really appreciate your instruction both to me and to the plugin developers: <http://code.google.com/p/r-labs/>

I also upgraded the plugin to the last tag (0.1.4) to check if it was already fixed: it isn't.

after upgrading the plugin I noticed there were more issues... so I checked and I've seen the 0.1.4 tagged version is behind the trunk version (previously installed)....

So I reverted back to the trunk.... Anyway I confirm that with the current trunk version (@r570 | toshiyuki.ando1971@gmail.com | 2011-06-05 01:59:26 +0200 (Sun, 05 Jun 2011) | 3 lines@) I have the reported issue and anything else seems to work.

So concluding this is a plugin issue not one of the ChiliProject core. Please tell the plugin author(s) and work with them on ChiliProject compatibility.
