ChiliProject - Feature # 615: Generate project identifier automatically with JavaScript

Status:	Closed	Priority:	Normal
Author:	Jan Schulz-Hofen	Category:	User interface
Created:	2011-09-11	Assignee:	Holger Just
Updated:	2011-10-31	Due date:	

Remote issue URL:

http://www.redmine.org/issues/9225

Affected version:

Description:

At "*Planio Redmine Hosting*":http://plan.io/redmine-hosting, we found that a *considerable number of first-time users got stuck while creating their first project*. The reason: the *project identifier*. As it is now, it's not clear what it is for and quite a few of our users tried identifiers starting with a number which yields a validation error that is not specific enough to help them understand that it actually has to start with an @a-z@ character.

This patch attempts to solve the issue by two small improvements:

automatically generate the identifier while the name is typed in # let the user know that the identifier must start with a lower case letter

Appreciate your comments and would love to see this making it into the core - I think it will improve the first time Redmine experience.

The patch is against our Redmine version. Might need only minor modifications for Chili.

Associated revisions

Add a time tracking block for 'My page' (#615).

It lists current user's time entries for the last 7 days across all projects, grouped by day with subtotals for each day, and a grand total.

[#615] Generate project identifier automatically with JavaScript

Also let the user know that the identifier must start with a lower case letter.

Contributed by Jan Schulz-Hofen.

History

- Target version set to 2.3.0

I like this patch. Some potential improvements to consider:

- * I'd use something more complete for normalizing diacritics like http://lehelk.com/2011/05/06/script-to-remove-diacritics/
- * We support underscores for project identifiers. There could be a flag if underscores or dashes should be used as the default separator.

2011-09-21 11:03 am - Jan Schulz-Hofen

There's an improved version including the diacritics and a fix regarding Etienne's concern with sequential identifiers at http://www.redmine.org/issues/9225

- Target version changed from 2.3.0 to 2.4.0

I like your new version. However, we still need to clear the license of the diacritics script. I think it's going to be okay, but we should nevertheless ask.

Thus, I'm postponing this feature to 2.4

2011-10-13 01:34 am - Eric Davis

Side comment: I'd like to start scoping our JavaScript. Putting functions in the global namespace is getting messy. Doesn't need to be done for this feature but we should start thinking about it.

- Assignee set to Holger Just

Pushed your updated version in commit:2f4afee (slightly updated).

Thanks Jan!
