Description:	Hi!
	I've installed "Markdown":https://github.com/bitherder/redmine_markdown_formatter/tree and "Markdown Extra":http://github.com/juno/redmine_markdown_extra_formatter/tree plugins (from the Redmine website).
	Their formatting syntax does work. Jstoolbar also works.
	But *jstoolbar lacks styling*! It's all generic buttons with text and now decoration. They're very bulky and wrap to three lines.
	I investigated it a little bit and found that *jstoolbar.css is not being included* (while jstoolbar.js is).
	PS My ChiliProject is installed via "git clone git://github.com/chiliproject/chiliproject.git".
