The syntax definitely works. As an example, this syntax

```
<pre>
```

```
p. This is a simple paragraph.
```

```
p(smallnote). This is a paragraph with a CSS class defined
```

```
</pre>
```

will create this markup:

```
---
```

```
p. This is a simple paragraph.
```

```
p(smallnote). This is a paragraph with a CSS class defined
```

```
---
```

One thing to note is that paragraph need to be in their own block, i.e. they require an empty line before the @p.@ Please verify that you use the correct syntax.

the empty line before the pdot did it :-)

maybe update the docs, so that is more clear :-)
