Remote issue URL:	
Affected version:	
Description:	When attempting to migrate to Chiliproject from Redmine 1.2.1 we received the following MySQL error while running the UpdateJournalsForActsAsJournalized migration. The error appears to be related to custom fields for issues created before the custom field was added. The error is: MysqlStatement::Error Value for field `value` cannot be NULL INSERT INTO custom_value ... Turning on allow NULL in the database allows the migration to run. In our example the custom field "Country" was added after issues had already been completed. It appears the migration is trying to rebuild the custom values, but because this issue is missing a value for 'Country' it tries to insert NULL and fails. I realize this possible cause is speculative. If I have more time to try isolate it more closely I will let you know.

Make an issue's done_ratio field adjustable from the right-click

context menu.

Uses patch from, and fixes #641. Patch by Dov Murik.

Revert "Make an issue's done_ratio field adjustable from the right-click"

Reverts commit r1277

fixes #904

refs #641

This had been working for me in testing for some time, but received

issue #904 saying it broke the context menu. I was able to make it do

so on a new project as well. Will revert and comment in #641 about this.

2008-03-21 06:32 pm - Jean-Philippe Lang

Add done_ratio to the right-click context menu.

Closes #904 (back_to variable used in patch #641 and in r1277 is no longer defined).
