

ChiliProject - Feature # 669: AJAX Loading of commit information

Status:	Open	Priority:	Normal
Author:	Ben Cooksley	Category:	
Created:	2011-10-19	Assignee:	
Updated:	2012-04-03	Due date:	
Remote issue URL:			
Affected version:			
Description:	Currently, when browsing Git repositories, if a particular directory has a large number of files, it can take some time to load the repository browser. The following attached patch is a suggested improvement to this, changing two things:		
	1) The use of a cache in the Git SCM backend, so repeated operations are fast		
	2) Loads the revision information seperately (when it is not cached)		
	The patch is currently only for Git - but the changes to make other backends support it as well should be fairly trivial.

Browsing performance problem is on only git.

Mercurial uses extension, so there is no problem.

I will rebase this patch on Redmine trunk.

This patch definitely increase load time for repository view. There is an expected delay between the page loading and displaying revision, age, author or commit details. On refresh after a period of time (i found it to be the original load time) those details are displayed.

(BTW im using CP 2.6)

Thanks!!

I meant it *decreases* load time

Not a problem.

Folks, what is happening with regards to getting this reviewed and merged?

2012-04-03 06:42 pm - John Daily Jr

I haven't had a chance to try this on CP 3.0, i'll update if I have any issues when i get around to it.
