

ChiliProject - Feature # 672: Allow queries to include subproject issues

Status:	Closed	Priority:	Normal
Author:	Eric Davis	Category:	Issue tracking
Created:	2011-10-25	Assignee:	Eric Davis
Updated:	2011-11-13	Due date:	
Remote issue URL:			
Affected version:			
Description:	Currently:		
	Issues are shown in two ways:		
	# issues for the current project only		
	# issues for the current project and subprojects (i.e. rollup)		
	This is controlled by an admin setting systemwide.		
	This patch changes how this works by:		
	* moves the "include subprojects" part down to each Query object		
	* adds a user interface to the issues list to let the user decide if they want to include or exclude subprojects on a case-by-case basis		
	* changes the Admin setting to function only as the default option		
	Should be backwards compatible with 2.x but there is the addition of a new database field (for saved queries)

Merge pull request #111 from edavis10/ticket/unstable/672-query-subprojects

#672 Allow queries to include subproject issues

History

2011-10-26 01:19 am - Eric Davis

- Status changed from Open to Ready for review

This is ready for review. I created it against unstable but I think it could be included into master. There is a database migration but the migration is backwards compatible so it could be in a minor release according to [[Release Standards]].

Pull request: <https://github.com/chiliproject/chiliproject/pull/111>

2011-11-13 08:15 pm - Felix Schäfer

- Target version set to 3.0.0

- Status changed from Ready for review to Closed

Merged on github, though I think the UI on the new project form could use a refinement, see #696 for that. Thanks :-)
