

ChiliProject - Bug # 710: AAJ tests do not run

Status:	Open	Priority:	Normal
Author:	Gregor Schmidt	Category:	Journals / History
Created:	2011-11-17	Assignee:	
Updated:	2011-12-01	Due date:	
Remote issue URL:			
Affected version:			
Description: While working on #708, I tried to start the plugin tests for acts_as_journalized. Unfortunately executing rake test:plugins NAME=acts_as_journalized did not work as expected. It is complaining about a missing @vestal_versions@ gem. When I remove all gem dependencies, that are unavailable, I'm running into other issues, e.g. the tests want to use a name accessor on the @User@ model, which is not there. I am not sure about the expected status of these tests, but Holger asked me to open this issue anyway.

They probably won't run while inside the app and should be run outside as a standalone library. In my opinion they should be removed because aaj is too coupled to the main code and is tested via the main test suite.

See also #405.

Probably.
