

ChiliProject - Bug # 711: translation missing: en, field_lock_version on issue edit on Ruby 1.9

Status:	Closed	Priority:	Normal
Author:	Moritz Breit	Category:	
Created:	2011-11-17	Assignee:	Felix Schäfer
Updated:	2011-11-25	Due date:	
Remote issue URL:			
Affected version:	master		
Description:	When running on Ruby 1.9, the issue edit form has label "translation missing: en, field_lock_version" (see attached screenshot). This happens in our production instance as well as on a new, clean instance. This has been reported in the Redmine tracker as well (http://www.redmine.org/issues/6853). The reason is a bug in @TabularFormBuilder@ that causes every hidden field to get label.

I have sent a pull request at Github that fixes this issue: <https://github.com/chiliproject/chiliproject/pull/126>

2011-11-25 07:01 pm - Felix Schäfer

- Target version set to 2.5.0

- Assignee set to Felix Schäfer

- Status changed from Open to Ready for review

Could reproduce this, checking the proposed fix.

2011-11-25 07:05 pm - Felix Schäfer

- Status changed from Ready for review to Closed

Works as advertised, merged in commit:574419b, thanks a lot :-)
