

ChiliProject - Feature # 723: Meaningful error message for activity fetcher failures

Status:	Open	Priority:	Normal
Author:	Holger Just	Category:	
Created:	2011-11-21	Assignee:	
Updated:	2011-11-21	Due date:	
Remote issue URL:			
Affected version:			
Description: Some plugins (especially for Redmine) don't work too well with aaj and thus produce errors, as observed e.g. in #699. Also corrupt data in core ChiliProject is sometimes causing 500 errors. These errors occur on user's pages and the activity pages with little possibilities to debug what's wrong. The stack trace should at least tell us which activity type and if possible which object is at fault.
