[#739] Convert relative links to full links in textile

Textile doesn't "understand" :only_path => false and thus doesn't convert links of the form

```
<pre>"foo":/bar</pre>
```

to full URLs, this is done in a subsequent method akin to the wiki_lins and so on

History

2011-11-30 07:46 am - Felix Schäfer

And the example link was meant to show:

```
<pre>"foo":/bar</pre>
```

- *(deleted custom field) set to master*

- *Status changed from Open to Ready for review*

See "pull 135":<https://github.com/chiliproject/chiliproject/pull/135> for a fix for that (though supporting the url_for/link_to things in the mailer feels like a hack :-/).
