

ChiliProject - Feature # 752: Show full project name in issue views

Status:	Open	Priority:	Normal
Author:	Marek Kralewski	Category:	
Created:	2011-12-02	Assignee:	
Updated:	2011-12-13	Due date:	
Remote issue URL:			
Affected version:			
Description: The "Project" title in views (issues or time_entries) does not include the parent project(s). Therefore it is very difficult to distinguish subprojects with the same name. I would like to see something like that: <pre> FirstProject -> SubProject SecondProject -> Subproject </pre> And I don't know if it is a bug or a feature?			

History

2011-12-12 08:13 pm - Eric Davis

- Subject changed from Only partial "Project" column in ticket views to Show full project name in issue views

- Tracker changed from Bug to Feature

Only problem I see with this is if you have deeply nested projects, then the column would get too wide.

Myself, I like how it is now where just the actual project name is listed (i.e. not listing parent projects).

That's a point.

How about making it configurable, i.e. having a "Parents" column in the select box?

That way it would not oppose your preferences.

I'm really hesitant to add more configuration. There are dozens of configuration panels already with options that confuse even me. :(

In reality, I think a plugin could be created to add the full project name to the issues list. Probably < 30 lines of code for it all since we have all the APIs there already.
